

Abstract

Fuel feed unit

In a fuel feed unit (3), a pump holder (10) has a plurality of sheet-metal strips (13, 14) for limiting the transmission of structure-borne sound from a fuel pump (5) to an anti-surge pot (2). The sheet-metal strips (13, 14) can be manufactured cost-effectively and adapted to the particular fuel pump (5). This enables the fuel feed unit (3) to be manufactured particularly cost-effectively.
